

# Extensions

- After installation wait about 4 days before washing
- Use shampoo, conditioner and other products free from sulfates, acids, proteins and alcohols as these can dry the hair, cause it to tangle and for the bonds to break down.
- Brush 2-5 times a day gently from the bottom up
- Brush in between extensions to avoid matting
- Brush before washing and NOT when wet
- Don't sleep with wet hair
- Blot dry hair, do not rub
- Plait before bed to prevent tangles
- Use a treatment regularly as they don't get your natural oils
- Heated appliances will shorten the life of your extensions so use care products, a low temperature and less frequent. Ideally, dry bonds and allow length to dry naturally.
- Dirt, sweat, chlorine and salt water will cause the hair to tangle and matt so avoid where possible and brush gently before washing.

NB: They are extensions not your real hair so some shedding and extensions coming loose is to be expected, up to 10%. Colour fading can also be expected as they are human hair.
